

## DS-TI302 UV TUBE TRANSILLUMINATOR

### Product Overview

The UV transilluminator is mainly used for observing the results of nucleic acid (DNA/RNA) gel electrophoresis and gel bands cutting. UV light of different wavelengths can be used to detect DNA and RNA electrophoresis gel samples.

### Product Features

Special UV filter glass, with good permeability and high sensitivity  
High-quality UV lamp tube, strong and uniform UV rays, and excellent fluorescence effect  
Standard 302nm (optional 254nm or 354nm) UV wavelength lamp tube  
Precise sealing structure effectively reduces the possibility of gel contamination and internal damage caused by leakage  
The protection cover can be positioned arbitrarily within 0°-180° to ensure optimal UV protect

Protection cover

UV filter glass

Power switch

## DS-TI302 UV TUBE TRANSILLUMINATOR

Model	DS-TI 302
Observation area	L 195mm X w 145 mm
Power Adapter	8W X 6
UV tube lifeline	>1.500h
Transmission wavelength	302nm (standard)
Dimension	L335mm X W265mm X H120mm
Weight	5 (kg)
Power supply	110V / 220V; 50/60Hz

UV Light

Cooling fan

UV tube

Protection cover

UV tube

Reasonable structure design  
Strong and uniform UV light  
Optimal fluorescent effect

Power switch

High quality sweating  
Power supply stable  
and long lifeline

Protection cover

Can be freely adjusted  
From 0° to 180° to ensure  
Optimal UV protection

Cooling fan

With cooling fan can  
prolong the service life
