Automatic 5-Diff Hematology Analyzer

DSK-8550

**5-Diff Differential of WBC
Double Chamber of WBC and RBC/PLT
29 parameters + 4 Histogram + 1
Scattergram
Up to 60 Sample/hour**

- Compatible with two methods of automatic injection and manual open injection. The automatic mode supports uninterrupted and continuous addition, and emergency samples can be inserted at any time. First detection
- Fully automatic sample injection completely simulates manual sample inversion and mixing.
- Intelligent WBC floating landmark technology, floating classification technology can automatically adapt to the changes of scatter plots, effectively identify the boundaries of various types of cells, and obtain more accurate white blood cell classification results.
- Automatic detection of blocked holes and blockage removal.

| Model | DSK-8550 |
|--------------------|--|
| Sample capacity | 50 supports emergency analysis |
| Function | 360 rotating bar cod scanning |
| Printer | Can be connected to an external laser printer |
| Display | 14 inches color-full touch screen display |
| Storage | Auto save more than 200.000 analysis result analysis |
| Data transpiration | USBX4,Rs232, LAN,HDMI supports multilingual settings |
| Dimension | 70X64X67 cm |
| Weight | 57 kg |
