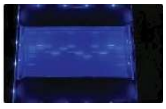
TRANSILLUMINATOR
UV TUBE

DS-TI 302

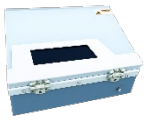
Product Overview

The UV transilluminator is mainly used for observing the results of nucleic acid (DNA/RNA) gel electrophoresis and gel bands cutting. UV light of different wavelengths can be used to detect DNA and RNA electrophoresis gel samples.

FEATURES



Reasonable structure design Strong and uniform UV light Optimal fluorescent effect



High quality sweeting Power supply stable and long lifeline

Can be freely adjusted Frome 0° to 180 ° to ensure Optimal UV protection

With cooling fan can prolong the service life

Product Features

Special UV filter glass, with good permeability and high sensitivity High-quality UV lamp tube, strong and uniform UV rays, and excellent fluorescence effect
Standard 302nm (optional 254nm or 354nm) UV wavelength lamp tube Precise sealing structure effectively reduces the possibility of gel contamination and internal damage caused by leakage
The protection cover can be positioned arbitrarily within 0°-180° to ensure optimal UV protect

Model	DS-TI 302
Observation area	L 195mm X w 145 mm
Power Adapter	8W X 6
UV tube lifeline	>1.500h
Transmission wavelength	302nm (standard)
Dimension	L335mm X W265mm X H120mm
Weight	5 (kg)
Power supply	110V / 220V; 50/60Hz
